Building Clouds Offers Elite Level Membership Packages and Rewards Program

Building Clouds' new Elite Level Pricing Programs are designed to allow building controls integrators to offer aggressively priced, comprehensive building automation and energy management projects. Elite members can sign up for the program level that matches their business model and annual sales forecasts.

All Elite members can deploy unlimited, fully licensed copies of the Opendiem Building Automation Software Suite including all client services, and connectivity drivers up to the annual point count limit determined by their membership level.

Packages start at \$799 per month for Elite-I with a maximum annual point count of 6,250. Other monthly programs include the Elite-II program which allows up to 25,000 points annually for \$1,500, Elite-III for \$2,500 and up to 50,000 points, and Elite-IV which does not have a maximum point count (unlimited) and sells for \$8,000 per month. All Elite Levels require a one year minimum term and members can elevate their Elite status as their business needs grow. Point counts, or tags as they are referred to in the industry, can continue to accumulate from year to year and are only deducted when they are used for projects.

Elite members are automatically enrolled in the Elite Rewards Program which credits user accounts for referrals to the program, deploying the software at two or more sites in a month, and for filling out case study reference forms.

Complete details of these programs can be found at www.opendiem.com and www.buildingclouds.com

About Building Clouds, LLC

Building Clouds is changing the way building systems connect, share data, and make intelligent real time decisions.

We provide complete hardware and software solutions for Building Automation and Energy Management Systems that seamlessly integrate data generated from building services and industrial processes into a simple easy to use web-based interface accessible literally anywhere, anytime. The Opendiem™ Suite can be hosted on any virtual cloud-based hardware platform so it doesn't require a proprietary connection to a controls network. Using your existing IT network infrastructure or the Internet, Opendiem allows you to monitor and control the settings and efficiency of building systems and industrial processes. Based on proven communications standards, Opendiem is fluent in most building management and industrial control system protocols. Product details can be found at www.buildingclouds.com.
