Opendiem Training Course 101 in TBD, from date to date

Opendiem Training Course 201 in TBD, from date to date

Course 101 Description: This course assists the attendee in obtaining a working knowledge of the Opendiem software product using a combination of classroom lecture and hands-on labs. Instruction to include software installation and licensing, project creation, security measures, driver connectivity, alarms and data logging, time schedules, alert annunciation, and Designer graphical interface creation.

Course 201 Description: This course assists the attendee in obtaining a working knowledge of the LonMaker Integration Tool, and VisualControl Suite software products using a combination of classroom lecture and hands-on labs. Instruction to include LonWorks network design theory, introduction to graphical block programming, control sequence basics, and building a “test” network.

Course requirements: Attendees are to provide and bring their own Wi-Fi capable laptop computer. Minimum computer and software requirements will be detailed at the time of course registration.

Completed applications and payment in full must be received 1 week prior to training start date
